

## What to do

This time think about your own situation:

Classroom organisation issues	Your choice
What resources would be available to you if you wanted to use ICT for a whole class presentation?	
How would you organise the resources to start the lesson off? Who would help you?	
How would you ensure that all pupils covered the key conceptual features?	
Are there any ways in which you could differentiate?	

## Outcomes

You have now evaluated a number of situations in the light of the development of ICT skills. You will be more aware of the range of skills needed by different people and how you can support the development, not only of your own skills, but the skills of those around you.
